

Benner's Stages Of Clinical Competence

Sherri Melrose, Caroline Park, Beth Perry

From Novice to Expert Patricia E. Benner, 2001 This coherent presentation of clinical judgement, caring practices and collaborative practice provides ideas and images that readers can draw upon in their interactions with others and in their interpretation of what nurses do. It includes many clear, colorful examples and describes the five stages of skill acquisition, the nature of clinical judgement and experiential learning and the seven major domains of nursing practice. The narrative method captures content and contextual issues that are often missed by formal models of nursing knowledge. The book uncovers the knowledge embedded in clinical nursing practice and provides the Dreyfus model of skill acquisition applied to nursing, an interpretive approach to identifying and describing clinical knowledge, nursing functions, effective management, research and clinical practice, career development and education, plus practical applications. For nurses and healthcare professionals.

Expertise in Nursing Practice Patricia E. Benner, Christine A. Tanner, Catherine A. Chesla, 1996 This long-awaited sequel to Benner's earlier book, *From Novice to Expert*, this volume further analyzes and examines the nature of clinical knowledge and judgment, using the authors' major new research study as its base. The authors interviewed and observed the practice of 130 hospital nurses, mainly in critical care, over a 6-year period, collecting hundreds of clinical narratives from which they have refined and deepened their explanation of the stages of clinical skill acquisition and the components of expert practice.

Expert Clinician to Novice Nurse Educator Jeanne Merkle Sorrell, PhD, FAAN, RN, Pamela Rubel Cangelosi, PhD, MSN, RN, 2015-08-24 Research shows that the sharing of personal, first-hand stories not only enhances learning and eases the transition to a new role, but also helps novice educators to understand that their challenges are shared by others. With the goal of improving the experience of nurses transitioning from clinician to educator, in hospitals as well as schools of nursing, this unique book presents the stories of nurses who made this transition. It presents the findings of several qualitative studies addressing the question, "What is the lived experience of clinicians as they assume new roles as clinical nurse educators?" These narratives describe the challenges they faced and transformations in each nurse's identity and relationships during the transition process. The text includes recommendations from the Carnegie Foundation for the Advancement of Teaching and specific problem-solving strategies that have worked for others. The narratives are from nurse clinicians, nurse educators, and students who provide insights into such common dilemmas faced by novice educators as "How do I keep a patient safe while allowing the student nurse to practice a skill for the first time?" "If a student is slow to catch on to a procedure, how long do I wait before they fail?" "How do I help provide a safe and effective learning environment for new graduate nurses?" The book includes stories of students who describe caring and uncaring experiences with clinical nurse educators. Stories address cultural diversity, bullying, and dilemmas related to critical and ethical thinking. Nurse educators themselves share insights into what they wish they had done differently to guide students and new

graduate nurses in their learning. While these storytellers had diverse clinical and educational backgrounds, there were consistent similarities between the experiences they described. One common thread was the need to embrace the role of a novice in order to succeed. The book will serve as a valuable text for graduate students in nurse educator courses as well as students and nurses seeking support, insight, and inspiration in their transition to the clinical nurse educator role. Key Features: Presents experiential narratives from nurses who made the transition from clinician to educator Describes important aspects of a nurse's transition from the role of clinical expert to that of novice educator Includes research-based insights in a highly accessible style and format Integrates National League for Nursing Core Competencies into the text Provides inspiring, helpful, and comforting guidance for nurse clinicians feeling lost or confused in a new role

Caring Matters Most Mark Lazenby, 2017 Caring Matters Most is a compact, highly readable book that explores the ethical nature of daily nursing practice and gives readers a path for being better nurses through the cultivation of five habits: trustworthiness, imagination, beauty, space, and presence. The Future of Nursing Institute of Medicine, Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of Medicine, 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

The Primacy of Caring Patricia E. Benner,Judith Wrubel,1989 The Primacy of Caring is unique and remarkable, not only because it eludes classification within the curricular and practice arenas of professional nursing, but also because it offers a totally new view of stress, coping, and caring. Interpersonal Relations In Nursing Hildegard E. Peplau, RN,1991-06-20 Originally published in 1952 by a towering

figure in nursing history, this book stresses the then novel theory of interpersonal relations as it was relevant to the work of nurses. Her framework suggested that interaction phenomena that occur during patient-nurse relationships have qualitative impact on patient outcomes. While the past four decades have seen a substantial expansion in the use and understanding of interpersonal theory, such as cognitive development and general systems theory, this classic book remains a useful foundation for all nurses as so much subsequent work used this work as its starting point. Springer Publishing Company is delighted to make this book available again.

Critical Thinking in Long-term Care Nursing Shelley Cohen, 2017 Resident outcomes have come under growing scrutiny, both through new quality measures and the overall star rating. When caring for residents and creating documentation, critical thinking can improve facility and resident outcomes while reducing medical errors, which will ultimately lead to more accurate reimbursement. Interspersed with creative strategies and notes from the field by clinical teachers who offer practical suggestions, this volume equips healthcare educators with sound pedagogical theory. The authors focus on the importance of personal philosophies, resilience, and professional socialization while evaluating the current practices in clinical learning environments from technology to assessment and evaluation.
